

Topic 3 - Question Set 3

Question #1

Topic 3

DRAG DROP -

You have a Microsoft Excel spreadsheet that contains the data shown in the following table.

Department	Stage	School1	School2	School3	School4
Mathematics	1	75	65	90	70
Mathematics	2	80	70	80	75
Geography	1	95	65	80	75
Geography	2	80	70	80	75

You plan to build a data model for a Power BI report.

You need to prepare the data so that it is available to the model in the format shown in the following table.

Department	School	Avg Score
Mathematics	School1	77.5
Geography	School1	87.5

Which three actions should you perform in sequence in Power Query Editor? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Select and Place:

Actions

- Select the [Department] and [Stage] columns and unpivot the other columns.
- Select and unpivot the [Department] and [Stage] columns.
- Group by [Department] and [School] and create a new column named [Avg Score] that uses the AVERAGE function on the [Score] column.
- Rename the [Attribute] column as [School] and the [Value] column as [Score].
- Group by [Department],[School1],[School2],[School3],[School4] and create a new column named [Avg Score] that uses the AVERAGE function on the [Stage] column.

Answer Area

Correct Answer:

Actions

-
- Select and unpivot the [Department] and [Stage] columns.
-
-
- Group by [Department],[School1],[School2],[School3],[School4] and create a new column named [Avg Score] that uses the AVERAGE function on the [Stage] column.

Answer Area

- Select the [Department] and [Stage] columns and unpivot the other columns.
- Rename the [Attribute] column as [School] and the [Value] column as [Score].
- Group by [Department] and [School] and create a new column named [Avg Score] that uses the AVERAGE function on the [Score] column.

Step 1: Select the [Department] and [Stage] columns and unpivot the other columns.

We unpivot the School1, School2, School3, and the School4 columns.

You might want to unpivot data, sometimes called flattening the data, to put it in a matrix format so that all similar values are in one column.

Example:

When you unpivot, you unpack the attribute-value pairs that represent an intersection point of the new columns and re-orient them into flattened columns:

* Values (in blue on the left) are unpivoted into a new column (in blue on the right).

* Attributes (in green on the left) are unpivoted into a new column (in green on the right) and duplicates are correspondingly mapped to the new Values column.

Step 2: Rename the [Attribute] column as [School] and the [Value] column as [Score],

Step 3: Group by [Department] and [School] and..

Reference:

<https://support.microsoft.com/en-us/office/unpivot-columns-power-query-0f7bad4b-9ea1-49c1-9d95-f588221c7098>

Question #2

Topic 3

You have a report that contains a bar chart and a column chart. The bar chart shows customer count by customer segment. The column chart shows sales by month.

You need to ensure that when a segment is selected in the bar chart, you see which portion of the total sales for the month belongs to the customer segment.

How should the visual interactions be set on the column chart when the bar chart is selected?

- A. highlight
- B. filter
- C. no impact

Correct Answer: A

In most visuals, highlighting doesn't remove the unrelated data. Instead it highlights the related data. The rest of the data remains visible but dimmed.

Note: By default, visualizations on a report page can be used to cross-filter and cross-highlight the other visualizations on the page. For example, selecting a state on a map visualization highlights the column chart and filters the line chart to display only data that applies to that one state.

Incorrect:

Not B: Filters remove all but the data you want to focus on.

Reference:

<https://docs.microsoft.com/en-us/power-bi/create-reports/power-bi-reports-filters-and-highlighting>

Community vote distribution

A (97%)

A user creates a Power BI report named ReportA that uses a custom theme.

You create a dashboard named DashboardA.

You need to ensure that DashboardA uses the custom theme. The solution must minimize development effort.

Which two actions should you perform? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. Publish ReportA to Power BI.
- B. From ReportA save the current theme.
- C. Publish ReportA to the Microsoft Power BI Community theme gallery.
- D. From DashboardA, create a custom theme.
- E. From DashboardA, upload a JSON theme.

Correct Answer: AE

A: With Power BI Desktop report themes, you can apply design changes to your entire report, such as using corporate colors, changing icon sets, or applying new default visual formatting.

When you publish a Power BI Desktop file to the Power BI service, you publish the data in the model to your Power BI workspace. The same is true for any reports you created in Report view.

To publish a Power BI Desktop dataset and reports

1. In Power BI Desktop, choose File > Publish > Publish to Power BI or select Publish on the ribbon.

Sign in to Power BI, if you aren't already signed in.

2. Select the destination. You can search your list of available workspaces to find the workspace into which you want to publish. The search box lets you filter your workspaces. Select the workspace, and then click the Select button to publish.

3. Etc.

E: One way to create a custom theme is to upload a JSON file that has settings for all the colors you'd like to use for your dashboard. In Power BI Desktop, report creators use JSON files to create themes for reports. You can upload these same JSON files for dashboards, or find and upload JSON files from the Theme gallery page in the Power BI Community.

You can also save your custom theme as a JSON file and then share it with other dashboard creators.

Question #4

Topic 3

You need to create a visualization that compares revenue and cost over time.
Which type of visualization should you use?

- A. waterfall chart
- B. stacked area chart
- C. line chart
- D. donut chart

Correct Answer: C

Line charts can have many different lines, for example both revenue and cost over time.

Reference:

<https://docs.microsoft.com/en-us/power-bi/visuals/power-bi-line-chart>

Community vote distribution

B (35%)

HOTSPOT -

You have a report in Power BI Desktop.

You add a key influencers visual as shown in the exhibit. (Click the Exhibit tab.)

Use the drop-down menus to select the answer choice that completes each statement based on the information presented in the graphic.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Identifying additional factors that increase attrition can be achieved by [answer choice].

-
- turning on Cross-report
- adding more fields to Explain by
- adding more fields to Expand by
- moving fields from Explain by to Expand by

Employee attrition is [answer choice] times greater when employees work overtime.

-
- 0.11
- .2
- 1
- 3

Correct Answer:

Answer Area

Identifying additional factors that increase attrition can be achieved by [answer choice].

	▼
turning on Cross-report	
adding more fields to Explain by	
adding more fields to Expand by	
moving fields from Explain by to Expand by	

Employee attrition is [answer choice] times greater when employees work overtime.

	▼
0.11	
.2	
1	
3	

Box 1: moving fields from Explain by to Expand by

You can use Expand By to add fields you want to use for setting the level of the analysis without looking for new influencers.

Why do certain factors become influencers or stop being influencers as I move more fields into the Explain by field?

The visualization evaluates all explanatory factors together. A factor might be an influencer by itself, but when it's considered with other factors it might not.

Box 2: 3 -

0.30 instead of 0.10. A factor of 3 greater.

Reference:

https://docs.microsoft.com/en-us/power-bi/visuals/power-bi-visualization-influencers

Question #6

Topic 3

You build a report to help the sales team understand its performance and the drivers of sales.

The team needs to have a single visualization to identify which factors affect success.

Which type of visualization should you use?

- A. Key influencers
- B. Line and clustered column chart
- C. Q&A
- D. Funnel chart

Correct Answer: A

The key influencers visual helps you understand the factors that drive a metric you're interested in. It analyzes your data, ranks the factors that matter, and displays them as key influencers. For example, suppose you want to figure out what influences employee turnover, which is also known as churn. One factor might be employment contract length, and another factor might be commute time.

When to use key influencers.

The key influencers visual is a great choice if you want to:

See which factors affect the metric being analyzed.

Contrast the relative importance of these factors. For example, do short-term contracts affect churn more than long-term contracts?

Reference:

https://docs.microsoft.com/en-us/power-bi/visuals/power-bi-visualization-influencers

Community vote distribution

A (100%)

HOTSPOT -

You have a table that contains the following three columns:

- City -
-
- ↔ Total Sales
- ↔ Occupation

You need to create a key influencers visualization as shown in the exhibit. (Click the Exhibit tab.)

How should you configure the visualization? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Analyze:

	▼
City	
Occupation	
Total Sales	

Explain by:

	▼
City	
Occupation	
Total Sales	

Answer Area

Correct Answer:

Analyze:

	▼
City	
Occupation	
Total Sales	

Explain by:

	▼
City	
Occupation	
Total Sales	

Box 1: Total Sales -
The key influencers visual helps you understand the factors that drive a metric you're interested in, here Total Sales. It analyzes your data, ranks the factors that matter, and displays them as key influencers.

Box 2: Occupation -
Measures and summarized columns are automatically analyzed at the level of the Explain by fields used.
Reference:
<https://docs.microsoft.com/en-us/power-bi/visuals/power-bi-visualization-influencers>

You are using the key influencers visual to identify which factors affect the quantity of items sold in an order.
You add the following fields to the Explain By field:

- Customer Country
- Product Category
- Supplier Country
- Sales Employee
- Supplier Name
- Product Name
- Customer City

The key influencers visual returns the results shown in the following exhibit.

What can you identify from the visual?

- A. Customers in Austria order 18.8 more units than the average order quantity.
- B. Customers in Boise order 20.37 percent more than the average order quantity.
- C. Product Category positively influences the quantity per order.
- D. Customers in Cork order lower quantities than average.

Correct Answer: A

Average quantity of units is displayed.

Incorrect:

Not B: Average quantity of units is displayed, not percentage.

Reference:

<https://docs.microsoft.com/en-us/power-bi/visuals/power-bi-visualization-influencers>

Question #9

Topic 3

You have a report that contains four pages. Each page contains slicers for the same four fields. Users report that when they select values in a slicer on one page, the selections are not persisted on other pages. You need to recommend a solution to ensure that users can select a value once to filter the results on all the pages. What are two possible recommendations to achieve this goal? Each correct answer presents a complete solution. NOTE: Each correct selection is worth one point.

- A. Create a bookmark for each slicer value.
- B. Replace the slicers with report-level filters.
- C. Sync the slicers across the pages.
- D. Replace the slicers with page-level filters.
- E. Replace the slicers with visual-level filters.

Correct Answer: BC

C: You can sync a slicer and use it on any or all pages in a report.
B: You can set filters at three different levels for the report: visual-level, page-level, and report-level.
Note: Suppose you want your report readers to be able to look at overall sales metrics, but also highlight performance for individual district managers and different time frames. You could create separate reports or comparative charts. You could add filters in the Filters pane. Or you could use slicers. Slicers are another way of filtering. They narrow the portion of the dataset that is shown in the other report visualizations.
Reference:
<https://docs.microsoft.com/en-us/power-bi/create-reports/power-bi-report-add-filter> <https://docs.microsoft.com/en-us/power-bi/visuals/power-bi-visualization-slicers>

Community vote distribution

BC (92%)	8%
----------	----

You have a report that includes a card visualization.

You need to apply the following conditional formatting to the card while minimizing design effort:

- For values that are greater than or equal to 100, the font of the data label must be dark red.
- For values that are less than 100, the font of the data label must be dark gray.

Which type of format should you use?

- A. Color scale
- B. Rules
- C. Field value

Correct Answer: B

Finding the conditional formatting in the card visual is a bit tricky. There is no separate option for that. You need to go to the Format tab of the visual, and then expand the Data Label. The right beside the Data Label's colour you need to hover your mouse, and you will find a three dots icon appearing, which if you click on it, you will see Conditional Formatting.

The image shows a Power BI card visual on the left with the text '9.90M SalesAmount'. On the right is the 'Format' pane. The 'Data label' section is expanded, showing a 'Color' dropdown. A red box highlights the three-dot menu icon next to the color dropdown. A yellow tooltip labeled 'Conditional formatting' is shown next to the icon. The background of the pane is light gray.

Now in the Conditional Formatting tab, you can apply it in different methods. for example, you can choose Rules, and then

Color

Format by

Rules

Based on field

<

Correct Answer:

Actions

From Focus mode, review the generated visuals.

From ReportA, select the treemap visual options, and then select **Spotlight**.

From DashboardA, select **TileA** to open ReportA.

Answer Area

From ReportA, select **Get Insights**.

From DashboardA, select the TileA options, and then select **View insights**.

From Focus mode, pin the relevant visuals to DashboardA.

Step 1: From ReportA, select Get Insights

Then select 'Get Insights' From the Datasets + dataflows tab, select More options (...) next to the dataset, and then choose Get insights. Power BI Quick Insights will now scan the data related to the tile and display a list of potential insights you may want to explore further. To drill into a specific data point, you can even select data in the visual and Quick Insights will focus on that data point when searching for insights.

The visualizations display in a special Quick Insights canvas with up to 32 separate insight cards. Each card has a chart or graph plus a short description.

Step 2: From DashboardA, select the TileA options, and then select View Insights

The insight screen opens in Focus mode.

Step 3: From Focus mode, pin the relevant visuals to DashboardA

Go to 'in focus mode' on a dashboard tile for data loaded into Power BI.

Reference:

<https://docs.microsoft.com/en-us/power-bi/create-reports/service-insights>

You are creating a dashboard by using the Power BI service.
You have an existing report page that contains three charts.
You need to add the charts to the dashboard while maintaining the interactivity between the charts.
What should you do?

- A. Edit interactions in the report and set all interactions to Filter.
- B. Pin each chart as a tile.
- C. Edit the dashboard theme and pin each chart as a tile.
- D. Pin the report page as a live tile.

Correct Answer: *D*

One way to add a new dashboard tile is by pinning an entire report page. This is an easy way to pin more than one visualization at a time. Also, when you pin an entire page, the tiles are live; you can interact with them right there on the dashboard. And changes you make to any of the visualizations back in the report editor, like adding a filter or changing the fields used in the chart, are reflected in the dashboard tile as well. Pinning live tiles from reports to dashboards is only available in Power BI service (app.powerbi.com).

Question #14

Topic 3

DRAG DROP -

You are using existing reports to build a dashboard that will be viewed frequently in portrait mode on mobile phones.

You need to build the dashboard.

Which four actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Select and Place:

Actions

Pin items from the reports to the dashboard.

Open the dashboard.

Create a phone layout for the existing reports.

Edit the Dashboard mobile view.

Rearrange, resize, or remove items from the mobile layout.

Answer Area

Correct Answer:

Actions

Create a phone layout for the existing reports.

Answer Area

Edit the Dashboard mobile view.

Pin items from the reports to the dashboard.

Open the dashboard.

Rearrange, resize, or remove items from the mobile layout.

Step 1: Edit the dashboard mobile view
Open a report in Editing view.

Step 2: Pin items from the reports to the dashboard

Step 3: Open the dashboard.
Open the dashboard to see the pinned live tile,
From the nav pane, select the dashboard with the new live tile. There, you can do things like rename, resize, link, and move the pinned report page.

Step 4: Rearrange, resize, or remove items from the mobile layout

Reference:
<https://docs.microsoft.com/en-us/power-bi/create-reports/service-dashboard-pin-live-tile-from-report>

You plan to create the chart shown in the following exhibit.

How should you create the dashed horizontal line denoting the 40th percentile of daily sales for the period shown?

- A. Add a measure to the visual that uses the following DAX expression. Measure1 = PERCENTILEX.INC (Sales,sales[Total Sales],0.40)
- B. Add a measure to the visual that uses the following DAX expression. Measure1 = PERCENTILEX.EXC (Sales,sales[Total Sales],0.40)
- C. Add a new percentile line that uses Total Sales as the measure and 40% as the percentile.
- D. Create a horizontal line that has a fixed value of 24,000.

Correct Answer: C

The analytics feature enables you to show percentiles across groups specified along a specific axis.

1. Click on the analytics tab
2. Select Percentile
3. You can choose a specific percentile along with other formatting options.
4. Drag a date or non-numeric dimension into the Axis of a column chart

Reference:
https://www.dash-intel.com/powerbi/statistical_functions_percentile.php

C (100%)

You are building a Power BI report.

Users will view the report by using their mobile device.

You need to configure the report to display data based on each user's location.

Which two actions should you perform? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. From Power Query Editor, detect the data types of the relevant columns.
- B. In Data Category, set the geographic data category for the relevant columns.
- C. Create a hierarchy for columns of the geography data type.
- D. Use the columns of the geography data type in all visuals.
- E. For the relevant columns, set synonyms to match common geographical terms.

Correct Answer: BD

B: Identify geographic data in your report

1. In Power BI Desktop, switch to Data View Data View icon.
2. Select a column with geographic data æ" for example, a City column.
3. On the Modeling tab, select Data Category, then the correct category æ" in this example, City.

4. Continue setting geographic data categories for any other fields in the model.

D: Create visuals with your geographic data

Switch to Report view Report View icon, and create visuals that use the geographic fields in your data.

In this example, the model also contains a calculated column that brings city and state together in one column.

Publish the report to the Power BI service.

You have a report that contains a donut chart and a clustered column chart. Interactions between the visuals use the default settings. You need to modify the report so that when you select a column in the column chart, the donut chart redraws by using the data from the selected column.

What should you do?

- A. Select the donut chart and set the column chart interaction to Filter.
- B. Select the column chart and set the donut chart interaction to Filter.
- C. Select the donut chart and set the column chart interaction to None.
- D. Select the column chart and set the donut chart interaction to None.

Correct Answer: B

Filters remove all but the data you want to focus on.

Note: Enable the visual interaction controls.

- 1. Select a visualization to make it active.
- 2. Display the Visual Interactions options.
- 3. In Power BI Desktop, select Format > Edit interactions.

4. To display the visualization interaction controls, select Edit interactions. Power BI adds filter and highlight icons to all of the other visualizations on the report page.

We can see that the tree map is cross-filtering the line chart and the map, and is cross-highlighting the column chart. You can now change how the selected visualization interacts with the other visualizations on the report page.

Question #19

Topic 3

You are creating a Power BI report by using Power BI Desktop.
You need to include a visual that shows trends and other useful information automatically. The visual must update based on selections in other visuals.
Which type of visual should you use?

- A. Q&A
- B. smart narrative
- C. key influencers
- D. decomposition tree

Correct Answer: B

The smart narrative visualization helps you quickly summarize visuals and reports. It provides relevant innovative insights that you can customize.

Use smart narrative summaries in your reports to address key takeaways, to point out trends, and to edit the language and format for a specific audience. In PowerPoint, instead of pasting a screenshot of your report's key takeaways, you can add narratives that are updated with every refresh. Your audience can use the summaries to understand the data, get to key points faster, and explain the data to others.

Reference:
<https://docs.microsoft.com/en-us/power-bi/visuals/power-bi-visualization-smart-narrative>

Community vote distribution

B (100%)

In Power BI Desktop, you have a dataset that contains a table.

You create a table visual on a Power BI report page as shown in the following exhibit.

Plant Name	Plant Image
Pothos	https://raw.githubusercontent.com/ml
Spider plant	https://raw.githubusercontent.com/ml
philodendron	https://raw.githubusercontent.com/ml
ZZ plant	https://raw.githubusercontent.com/ml

You need to configure the visual to display the referenced image instead of the URL in the Plant Image column.

What should you do?

- A. From the Formatting tab, select Values, and then set URL icons to On for the table.
- B. Set the Data category of the Plant Image field to Web URL.
- C. Set the Data type of the Plant Image field to Binary.
- D. Set the Data category of the Plant Image field to Image URL.

Correct Answer: *D*

Add images to your report -

1. Create a column with the URLs of the images. See Considerations later in this article for requirements.
2. Select that column. On the Column tools ribbon, for Data category, select Image URL.
3. Add the column to a table, matrix, slicer, or multi-row card.

Step 3: From powerbi.com, add a tile for Excel1 dataset to DashboardA.

In the Power BI service (app.powerbi.com), a dashboard contains tiles pinned from one or more datasets, so you can ask questions about any of the data contained in any of those datasets.

Reference:
<https://docs.microsoft.com/en-us/power-bi/create-reports/power-bi-images-tables> <https://docs.microsoft.com/en-us/power-bi/create-reports/power-bi-tutorial-q-and-a>

Community vote distribution

D (100%)

DRAG DROP -

You have a Microsoft Excel spreadsheet named Excel1 that contains survey results.

You have a Power BI dashboard named DashboardA that has Q&A enabled.

You need to ensure that users who can access DashboardA can ask questions based on the contents of Excel1 and pin visuals based on their queries to DashboardA. The solution must minimize development time.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Select and Place:

Actions

From powerbi.com, pin a range from Excel1 to DashboardA.

From Excel, format the data in Excel1 as a table.

From powerbi.com, import Excel1 as a dataset.

From powerbi.com, add a tile for the Excel1 dataset to DashboardA.

From Excel, create a named range by using the data in Excel1.

From powerbi.com, upload Excel1.

Answer Area

Correct Answer:

Actions

From powerbi.com, pin a range from Excel1 to DashboardA.

From Excel, format the data in Excel1 as a table.

From Excel, create a named range by using the data in Excel1.

Answer Area

From powerbi.com, upload Excel1.

From powerbi.com, import Excel1 as a dataset.

From powerbi.com, add a tile for the Excel1 dataset to DashboardA.

Step 1: From powerbi.com, upload Excel1.

Upload your Excel file to the Power BI service.

The Power BI service connects to many data sources, including Excel files that live on your computer.

1. Sign in to the Power BI service.
2. In My workspace, select New > Upload a file.
3. Select Local File, browse to where you saved the Financial Sample Excel file, and select Open.
4. On the Local File page, select Import.

Now you have a Financial Sample dataset. Power BI also automatically created a blank dashboard. If you don't see the dashboard, refresh your browser.

Step 2: From powerbi.com, import Excel1 as a dataset.

Step 3: From powerbi.com, add a tile for the Excel1 dataset to DashboarA.

Question #22

Topic 3

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution. After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen. You have a clustered bar chart that contains a measure named Salary as the value and a field named Employee as the axis. Salary is present in the data as a numerical amount representing US dollars.

You need to create a reference line to show which employees are above the median salary.

Solution: You create a constant line and set the value to .5.

Does this meet the goal?

A. Yes

B. No

Correct Answer: B

Instead: You create a percentile line by using the Salary measure and set the percentile to 50%.
The median is the middle value or the 50th percentile of a data set.

HOTSPOT -

You are profiling data by using Power Query Editor.

You have a table that contains a column named column1. Column statistics and Value distribution for column1 are shown in the following exhibit.

Use the drop-down menus to select the answer choice that completes each statement based on the information presented in the graphic.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

There [answer choice] only once.

-
- are 20 values that occur
- are 365 values that occur
- are 277,329 values that occur
- is one value that occurs

The Pear, Flowering species is found more often in column1 than the [answer choice] species.

-
- Ash, Green
- Crabapple, Flowering
- Elm, American
- Spruce, Blue

Correct Answer:

Answer Area

There [answer choice] only once.

are 20 values that occur
are 365 values that occur
are 277,329 values that occur
is one value that occurs

The Pear, Flowering species is found more often in column1 than the [answer choice] species.

Ash, Green
Crabapple, Flowering
Elm, American
Spruce, Blue

Box 1: are 20 values that occur -
There are 20 unique values.

Box 2: Elm, American -
Elm, American is below Peer, flowering species in the graphic.

You have a Power BI report hosted on powerbi.com that displays expenses by department for department managers. The report contains a line chart that shows expenses by month. You need to enable users to choose between viewing the report as a line chart or a column chart. The solution must minimize development and maintenance effort. What should you do?

- A. Enable report readers to personalize visuals.
- B. Create a separate report page for users to view the column chart.
- C. Add a column chart, a bookmark, and a button for users to choose a visual.
- D. Create a mobile report that contains a column chart.

Correct Answer: C

Let users personalize visuals in a report

Enable personalization in a report

You can enable the feature either in Power BI Desktop or the Power BI service. You can also enable it in embedded reports. To enable the feature in the Power BI (powerbi.com) service, go to Settings for your report.

A (59%)

C (41%)

You have two Power BI reports named ReportA and ReportB that each uses a distinct color palette.

You are creating a Power BI dashboard that will include two visuals from each report.

You need to use a consistent dark theme for the dashboard. The solution must preserve the original colors of the reports.

Which two actions should you perform? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. Upload a snapshot.
- B. For the browser, set the color preference to dark mode.
- C. When pinning visuals to the dashboard, select Use destination theme.
- D. Select the dark dashboard theme.
- E. Turn on tile flow.

Correct Answer: CD

D: With dashboard themes you can apply a color theme to your entire dashboard, such as corporate colors, seasonal coloring, or any other color theme you might want to apply. When you apply a dashboard theme, all visuals on your dashboard use the colors from your selected theme. In the dashboard pane that appears, select one of the pre-built themes. In the example below, we've selected Dark.

C: Reports and dashboards with different themes

If your report uses a different theme from the dashboard theme, in most cases you can control whether the visual retains the current report theme or uses the dashboard theme.

* Try re-pinning the tile and selecting Use dashboard theme.

Reference:
<https://docs.microsoft.com/en-us/power-bi/create-reports/service-dashboard-themes>

HOTSPOT -

You have a dataset that contains revenue data from the past year.

You need to use anomaly detection in Power BI to show anomalies in the dataset.

What should you configure? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Chart type:

Line
Pie
Treemap

Chart configuration:

Select the Show value as option
Enable Cross-report drill-through
Populate the axis with a date field

Answer Area

Correct Answer:

Chart type:

Line
Pie
Treemap

Chart configuration:

Select the Show value as option
Enable Cross-report drill-through
Populate the axis with a date field

Box 1: Line -

Anomaly detection is only supported for line chart visuals containing time series data in the Axis field.

Box 2: Populate the axis with a date field

Incorrect:

- * Anomaly Explanations doesn't work with 'Show Value As' options.
- * Drilling down to go to the next level in the hierarchy isn't supported.

Reference:

<https://docs.microsoft.com/en-us/power-bi/visuals/power-bi-visualization-anomaly-detection>

You have a line chart that shows the number of employees in a department over time.
You need to see the total salary costs of the employees when you hover over a data point.
What should you do?

- A. Add salary to the drillthrough fields.
- B. Add salary to the visual filters.
- C. Add salary to the tooltips.

Correct Answer: C

Customize tooltips with aggregation or quick measures
You can customize a tooltip by selecting an aggregation function.
Select the arrow beside the field in the Tooltips bucket. Then, select from the available options.

Note: Tooltips are an elegant way of providing more contextual information and detail to data points on a visual. You can customize tooltips in Power BI Desktop and in the Power BI service.

When a visualization is created, the default tooltip displays the data point's value and category.

Reference:

<https://docs.microsoft.com/en-us/power-bi/create-reports/desktop-custom-tooltips>

D (100%)

You need to create a visual that enables the adhoc exploration of data as shown in the following exhibit.

Which type of visual should you use?

- A. smart narrative
- B. decomposition tree
- C. Q&A
- D. key influencers

Correct Answer: B

The decomposition tree visual in Power BI lets you visualize data across multiple dimensions. It automatically aggregates data and enables drilling down into your dimensions in any order. It is also an artificial intelligence (AI) visualization, so you can ask it to find the next dimension to drill down into based on certain criteria.

This makes it a valuable tool for ad hoc exploration and conducting root cause analysis.

Example:

Root Cause Analysis

Average of Backorder % by Month

High Risk Low Risk

Reference:
<https://docs.microsoft.com/en-us/power-bi/visuals/power-bi-visualization-decomposition-tree>

Community vote distribution

B (100%)

Your company has employees in 10 states.

The company recently decided to associate each state to one of the following three regions: East, West, and North.

You have a data model that contains employee information by state. The model does NOT include region information.

You have a report that shows the employees by state.

You need to view the employees by region as quickly as possible.

What should you do?

- A. Create a new aggregation that summarizes by state.
- B. Create a new aggregation that summarizes by employee.
- C. Create a new group on the state column and set the Group type to List.
- D. Create a new group on the state column and set the Group type to Bin.

Correct Answer: C

In Power BI Desktop, you can group data points to help you more clearly view, analyze, and explore data and trends in your visuals.

Example:

Incorrect:

Not D: You can also define the bin size to put values into equally sized groups that better enable you to visualize data in ways that are meaningful. This action is often called binning.

Reference:

<https://docs.microsoft.com/en-us/power-bi/create-reports/desktop-grouping-and-binning>

Community vote distribution

C (100%)

Question #33

Topic 3

You have a collection of reports for the HR department of your company.
You need to create a visualization for the HR department that shows historical employee counts and predicts trends during the next six months.
Which type of visualization should you use?

- A. ribbon chart
- B. scatter chart
- C. line chart
- D. key influencers

Correct Answer: C

The best data for forecasting is time series data or uniformly increasing whole numbers. The line chart has to have only one line.
Reference:

<https://powerbi.microsoft.com/fr-ca/blog/introducing-new-forecasting-capabilities-in-power-view-for-office-365/>

Community vote distribution

C (100%)

You have a Microsoft Power BI dashboard. The report used to create the dashboard uses an imported dataset from a Microsoft SQL Server data source.

The dashboard is shown in the exhibit. (Click the Exhibit tab.)

What occurred at 12:03:06 PM?

- A. A new transaction was added to the data source.
- B. The dashboard tile cache refreshed.
- C. A user added a comment to a tile.
- D. A user pressed F5.

Correct Answer: D

If you press F5 or hit the refresh button, the dashboard charts gets updated.

Note: Power BI enables you to go from data to insight to action quickly, yet you must make sure the data in your Power BI reports and dashboards is recent.

Knowing how to refresh the data is often critical in delivering accurate results.

Reference:

<https://docs.microsoft.com/en-us/power-bi/connect-data/refresh-data>

Community vote distribution

B (83%)

Other

HOTSPOT -

You need to create a Power BI report. The first page of the report must contain the following two views:

- ☞ Sales By Postal Code
- ☞ Sales by Month

Both views must display a slicer to select a value for a field named Chain.

The Sales By Postal Code view must display a map visual as shown in the following exhibit.

The Sales By Month view must display a column chart visual as shown in the following exhibit.

Users must be able to switch between the views by using buttons on the report page. The selected Chain field must be maintained when switching between views.

What is the minimum number of bookmarks required, and which property should you apply to each bookmark? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Minimum number of bookmarks:

1
2
3
4

Property:

Data
Display
Current page

Answer Area

Minimum number of bookmarks:

1
2
3
4

Correct Answer:

Property:

Data
Display
Current page

Box 1: 2 -
One for each visual.

Note: When you edit a report in Power BI Desktop and the Power BI service, you can add report bookmarks to capture the current state of a report page.

Bookmarks save the current filters and slicers, cross-highlighted visuals, sort order, and so on. When others view your report, they can get back to that exact state by selecting your saved bookmark.

Box 2: Display -
Users must be able to switch between the views by using buttons on the report page. The selected Chain field must be maintained when switching between views.

You can select whether each bookmark will apply Data properties, such as filters and slicers; Display properties, such as spotlight and its visibility; and Current page changes, which present the page that was visible when the bookmark was added. These capabilities are useful when you use bookmarks to switch between report views or selections of visuals, in which case you'd likely want to turn off data properties, so that filters aren't reset when users switch views by selecting a bookmark.

Note: When you create a bookmark, the following elements are saved with the bookmark:

The current page -

Filters -

Slicers, including slicer type (for example, dropdown or list) and slicer state

Visual selection state (such as cross-highlight filters)

Sort order -

Drill location -

Visibility of an object (by using the Selection pane)

The focus or Spotlight mode of any visible object

Reference:

<https://docs.microsoft.com/en-us/power-bi/create-reports/desktop-bookmarks>

You have the visual shown in the exhibit. (Click the Exhibit tab.)

You need to show the relationship between Total Cost and Total Sales over time.
What should you do?

- A. Add a play axis.
- B. From the Analytics pane, add an Average line.
- C. Add a slicer for the year.
- D. Create a DAX measure that calculates year-over-year growth.

Correct Answer: A

When to use a slicer -
Slicers are a great choice when you want to:
Display commonly used or important filters on the report canvas for easier access.
Make it easier to see the current filtered state without having to open a drop-down list.
Filter by columns that are unneeded and hidden in the data tables.
Create more focused reports by putting slicers next to important visuals.
Note: Suppose you want your report readers to be able to look at overall sales metrics, but also highlight performance for individual district managers and different time frames. You could create separate reports or comparative charts. You could add filters in the Filters pane. Or you could use slicers. Slicers are another way of filtering. They narrow the portion of the dataset that is shown in the other report visualizations.
Reference:
<https://docs.microsoft.com/en-us/power-bi/visuals/power-bi-visualization-slicers>

Community vote distribution

A (87%)

13%

Question #37

Topic 3

HOTSPOT -

You have the Power BI dashboard shown in the Dashboard exhibit. (Click the Dashboard tab.)

You need to ensure that when users view the dashboard on a mobile device, the dashboard appears as shown in the Mobile exhibit. (Click the Mobile tab.)

What should you do? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Update the layout in the:

Dashboard mobile layout
Dashboard web layout
Report mobile layout

Resize and move:

Correct Answer:

Update the layout in the:

Dashboard mobile layout

Dashboard web layout

Report mobile layout

Resize and move:

The SubTotal map tile

The Total Sales and Total Quantity tiles

The Total Sales by Parent Category tile

Box 1: Report mobile layout -

Power BI provides a number of features to help you create mobile-optimized versions of your reports:

- * A mobile layout view where you create your mobile-optimized report by dragging and dropping visuals onto a phone emulator canvas.
- * Etc.

Box 2: The Total Sales by Parent Category tile

Reference:

<https://docs.microsoft.com/en-us/power-bi/create-reports/power-bi-create-mobile-optimized-report-about>

Question #38

Topic 3

You are building a Power BI report to analyze customer segments.

You need to identify customer segments dynamically based on the Bounce Rate across dimensions such as source, geography, and demographics. The solution must minimize analysis effort.

Which type of visualization should you use?

- A. decomposition tree
- B. funnel chart
- C. Q&A
- D. key influencers

Correct Answer: A

The decomposition tree visual in Power BI lets you visualize data across multiple dimensions. It automatically aggregates data and enables drilling down into your dimensions in any order. It is also an artificial intelligence (AI) visualization, so you can ask it to find the next dimension to drill down into based on certain criteria.

This makes it a valuable tool for ad hoc exploration and conducting root cause analysis.

Reference:

<https://docs.microsoft.com/en-us/power-bi/visuals/power-bi-visualization-decomposition-tree>

Question #39

Topic 3

You have a table that contains sales data and approximately 1,000 rows.

You need to identify outliers in the table.

Which type of visualization should you use?

A. area chart

B. scatter plot

C. pie chart

D. donut chart

Correct Answer: *B*

Outlier Detection in Power BI using Funnel Plot, which is a scatter plot.

Outliers are those data points that lie outside the overall pattern of distribution & the easiest way to detect outliers is through graphs. Box plots, Scatter plots can help detect them easily.

Reference:

<https://towardsdatascience.com/this-article-is-about-identifying-outliers-through-funnel-plots-using-the-microsoft-power-bi-d7ad16ac9ccc>

Community vote distribution

B (100%)

Question #40

Topic 3

You have a report that contains three pages. One of the pages contains a KPI visualization.

You need to filter all the visualizations in the report except for the KPI visualization.

Which two actions should you perform? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

A. Edit the interactions of the KPI visualization.

B. Add the same slicer to each page and configure Sync slicers.

C. Edit the interactions of the slicer that is on the same page as the KPI visualization.

D. Configure a page-level filter.

E. Configure a report-level filter.

Correct Answer: *BC*

Slicers are another way of filtering. They narrow the portion of the dataset that is shown in the other report visualizations.

Control which page visuals are affected by slicers

Example: Use visual interactions to keep slicer selections from filtering this chart.

1. Go to the Overview page of the report, and then select the DM slicer you previously created.
2. On the Power BI Desktop menu, select the Format menu under Visual Tools, and then select Edit interactions.
3. Filter controls, each with a Filter and a None option, appear above all the visuals on the page. Initially, the Filter option is preselected on all the controls.
4. Select the None option in the filter control above the Total Sales Variance by FiscalMonth and District Manager chart to stop the DM slicer from filtering it.

Incorrect:

Not D: A page-level filter is used to filter an entire page.

Not E: A report-level filter is used to filter an entire report.

Reference:

<https://docs.microsoft.com/en-us/power-bi/create-reports/power-bi-report-add-filter>

Question #41

Topic 3

HOTSPOT -

You have a Power BI visual that uses indicators to show values that are out of range as shown in the following exhibit.

Revenue by Date

Use the drop-down menus to select the answer choice that completes each statement based on the information presented in the graphic.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

The visual type is [answer choice] chart.

- a line
- a line and clustered column
- an area

The visual indicators that show values out of range are created by using [answer choice].

- a custom visual
- a trendline
- anomaly detection
- line chart markers

Correct Answer:

Answer Area

The visual type is [answer choice] chart.

- a line
- a line and clustered column
- an area

The visual indicators that show values out of range are created by using [answer choice].

- a custom visual
- a trendline
- anomaly detection
- line chart markers

Box 1: a line -

Incorrect:

* not line and clustered column

The Line and Clustered Column Chart is a combo charts that combines the Line chart and Column chart together in one visual. By combining these two visuals together, you can make a very quick comparison between two sets of measures.

Box 2: anomaly detection -

Anomaly detection helps you enhance your line charts by automatically detecting anomalies in your time series data. It also provides explanations for the anomalies to help with root cause analysis. With just a couple of clicks, you can easily find insights without slicing and dicing the data.

Example:

Reference:
<https://docs.microsoft.com/en-us/power-bi/visuals/power-bi-visualization-anomaly-detection>

You are creating a Power BI report to analyze consumer purchasing patterns from a table named Transactions. The Transactions table contains a numeric field named Spend.

You need to include a visual that identifies which fields have the greatest impact on Spend.

Which type of visual should you use?

- A. Q&A
- B. smart narrative
- C. decomposition tree
- D. key influencers

Correct Answer: D

The key influencers visual helps you understand the factors that drive a metric you're interested in. It analyzes your data, ranks the factors that matter, and displays them as key influencers. For example, suppose you want to figure out what influences employee turnover, which is also known as churn. One factor might be employment contract length, and another factor might be commute time.

When to use key influencers -

The key influencers visual is a great choice if you want to:

See which factors affect the metric being analyzed.

Contrast the relative importance of these factors. For example, do short-term contracts affect churn more than long-term contracts?

Reference:

<https://docs.microsoft.com/en-us/power-bi/visuals/power-bi-visualization-influencers>

Secondary values

Box 1: an average reference line

With the Analytics pane in Power BI Desktop, you can add dynamic reference lines to visuals, and provide focus for important trends or insights.

Box 2: Values -

Add a measure to drillthrough -

You can add a measure or a summarized numeric column to the drillthrough area. Drag the drillthrough field to the Drillthrough card on the drillthrough target page to apply it.

When you add a measure or summarized numeric column, you can drill through to the page when the field is used in the Value area of a visual.

<https://docs.microsoft.com/en-us/power-bi/transform-model/desktop-analytics-pane>

Question #44

Topic 3

You have a dashboard that contains tiles pinned from a single report as shown in the Original Dashboard exhibit. (Click the Original Dashboard tab.)

You need to modify the dashboard to appear as shown in the Modified Dashboard exhibit. (Click the Modified Dashboard tab.)

What should you do?

- A. Change the report theme.
- B. Change the dashboard theme.
- C. Edit the details of each tile.
- D. Create a custom CSS file.

Correct Answer: B

With dashboard themes you can apply a color theme to your entire dashboard, such as corporate colors, seasonal coloring, or any other color theme you might want to apply. When you apply a dashboard theme, all visuals on your dashboard use the colors from your selected theme.

Incorrect:

Not A: With Power BI Desktop report themes, you can apply design changes to your entire report, such as using corporate colors, changing icon

sets, or applying new default visual formatting.

Reference:

<https://docs.microsoft.com/en-us/power-bi/create-reports/service-dashboard-themes>

B (100%)

Question #45

Topic 3

You have a Power BI report. The report contains a visual that shows gross sales by date. The visual has anomaly detection enabled. No anomalies are detected. You need to increase the likelihood that anomaly detection will identify anomalies in the report. What should you do?

- A. Increase the Expected range transparency setting.
- B. Add a data field to the Legend field well.
- C. Increase the Sensitivity setting.
- D. Add a data field to the Secondary values field well.

Correct Answer: A

Adding anomaly detection automatically enriches the chart with anomalies, and the expected range of values. When a value goes outside this expected boundary, it's marked as an anomaly.

Reference:

<https://docs.microsoft.com/en-us/power-bi/visuals/power-bi-visualization-anomaly-detection>

Community vote distribution

C (100%)

You maintain a Power BI workspace that contains a supplier quality dashboard. The dashboard contains 10 card visuals, two map visuals and five bar chart visuals.

The dashboard mobile layout is shown in the exhibit. (Click the Exhibit tab.)

You need to modify the dashboard mobile layout to meet the following requirements:

- ☞ Only show single-value visuals.
- ☞ Minimize scrolling.

What should you do?

- A. Decrease the size of the card visuals. Remove the map and bar chart visuals.
- B. Decrease the size of the map and bar chart visuals. Move all the card visuals to the top of the layout.
- C. Remove the card visuals. Increase the size of the map and bar chart visuals.
- D. Move the bar chart visuals to the top of the layout. Remove the map visuals. Decrease the size of the card visuals.

Correct Answer: A

Community vote distribution

A (100%)

Question #47

Topic 3

You have a Power BI report.

You have a table named Data1 that contains 10 million rows.

Data1 is used in the following visuals:

- ☞ A card that shows the number of records
- ☞ A bar chart that shows total transaction amount by territory
- ☞ A scatter plot that shows transaction amount and profit amount on the axes and points colored by territory

You need to modify the scatter plot to make it easier for users to identify meaningful patterns. The solution must not affect the accuracy of the other visuals.

What should you do?

A. Add a count field of the transaction amount to the size bucket of the scatter plot.

B. Add a trend line to the scatter plot.

C. Enable high-density sampling on the scatter plot.

D. Apply a row filter to the Data1 query in Power Query Editor.

Correct Answer: B

A trend line is a straight line that best represents the points on a scatterplot. The trend line may go through some points but need not go through them all. The trend line is used to show the pattern of the data. This trend line may show a positive trend or a negative trend.

Question #48

Topic 3

You have a Power BI workspace named Inventory that contains a dataset, a report, and a dashboard.

You need to add an additional tile to the dashboard. The tile must show inventory by location. This information is NOT visualized in the report. The solution must minimize the impact on the report.

Which two actions should you perform? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. Ask a question by using Q&A.
- B. Hide the report page.
- C. Pin the visual to the dashboard.
- D. Use quick insights on the dashboard.
- E. Add the visual to the report.

Correct Answer: AC

In the Power BI service (app.powerbi.com), a dashboard contains tiles pinned from one or more datasets, so you can ask questions about any of the data contained in any of those datasets. T

The answer to your question is displayed as an interactive visualization and updates as you modify the question.

Open a dashboard and place your cursor in the question box. Even before you start typing, Q&A displays a new screen with suggestions to help you form your question. You see phrases and complete questions containing the names of the tables in the underlying datasets and may even see complete questions listed if the dataset owner has created featured questions,

AD (23%)

HOTSPOT -

You have a dataset named Pens that contains the following columns:

- Item
- Unit Price
- Quantity Ordered

You need to create a visualization that shows the relationship between Unit Price and Quantity Ordered. The solution must highlight orders that have a similar unit price and ordered quantity.

Which type of visualization and which feature should you use? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Visualization:

A column chart of Quantity Ordered and Unit Price by year
A line chart of Quantity Ordered and Unit Price by item
A scatter plot of Quantity Ordered and Unit Price by item

Feature:

Automatically find clusters
Explain the decrease
Find where the distribution is different

Correct Answer:

Answer Area

Visualization:

A column chart of Quantity Ordered and Unit Price by year
A line chart of Quantity Ordered and Unit Price by item
A scatter plot of Quantity Ordered and Unit Price by item

Feature:

Automatically find clusters
Explain the decrease
Find where the distribution is different

Box 1: A scatter plot of Quantity Ordered and Unit Price by item

A scatter chart shows the relationship between two numerical values.

Note: Scatter charts are a great choice:

- To show relationships between two numerical values.
- To plot two groups of numbers as one series of x and y coordinates.
- To use instead of a line chart when you want to change the scale of the horizontal axis.
- To turn the horizontal axis into a logarithmic scale.
- To display worksheet data that includes pairs or grouped sets of values.
- To show patterns in large sets of data, for example by showing linear or non-linear trends, clusters, and outliers.
- To compare large numbers of data points without regard to time. The more data that you include in a Scatter chart, the better the comparisons that you can make.

Box 2: Automatically find clusters

Scatter charts are a great choice:

* To show patterns in large sets of data, for example by showing linear or non-linear trends, clusters, and outliers.

<https://github.com/Microsoft/powerbi-visuals-corrplot/>

Question #50

Topic 3

You have a Power BI report that contains three pages named Page1, Page2, and Page3. All the pages have the same slicers. You need to ensure that all the filters applied to Page1 apply to Page1 and Page3 only. What should you do?

- A. On each page, modify the interactions of the slicer.
- B. Enable visibility of the slicers on Page1 and Page3. Disable visibility of the slicer on Page2.
- C. Sync the slicers on Page1 and Page3.

Correct Answer: A

Control which page visuals are affected by slicers

By default, slicers on report pages affect all the other visualizations on that page, including each other. As you choose values in the list and date slicers that you just created, notice the effects on the other visualizations. The filtered data is an intersection of the values selected in both slicers.

Use visual interactions to exclude some page visualizations from being affected by others. On the Overview page, the Total Sales Variance by FiscalMonth and

District Manager chart shows overall comparative data for district managers by month, which is information that you want to keep visible. Use visual interactions to keep slicer selections from filtering this chart.

1. Go to the Overview page of the report, and then select the DM slicer you previously created.
2. On the Power BI Desktop menu, select the Format menu under Visual Tools, and then select Edit interactions.
3. Filter controls, each with a Filter and a None option, appear above all the visuals on the page. Initially, the Filter option is preselected on all the controls.
4. Select the None option in the filter control above the Total Sales Variance by FiscalMonth and District Manager chart to stop the DM slicer from filtering it.

Question #57

Topic 3

DRAG DROP

-

You have a Power BI report that contains a table visual with a measure named Revenue. The Revenue measure returns values within a range of 0 to 5.

You need to format the visual so that the Revenue column displays a specific background color based on the value range shown in the following table.

Range	Background color
Values equal to zero	#FFFFFF
Values above 0 and less than or equal to 2	#FFC000
Values above 2 and less than or equal to 3	#E2EFDA
Values above 3 and less than or equal to 4	#A9D062
Values above 4	#00B050

Which three actions should you perform in sequence in Power BI Desktop? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions

Set Format style to Rules.

Add and configure a new rule for each value range.

Set Format style to Field value.

Open the Background color dialog for the Revenue column.

Open the Font color dialog for the Revenue column.

Answer Area

Correct Answer:

Open the Background color dialog for the Revenue column.

Set Format style to Rules.

Add and configure a new rule for each value range.

Question #58

Topic 3

You have a Power BI report that contains four pages.

All the pages contain a slicer for a field named Country.

You need to ensure that when a user selects a country on page 1, the selection is retained on page 2 and page 3. The solution must prevent page 4 from being affected by selections on the other pages.

What should you do?

A. Remove the Country slicer from page 1, page 2, and page 3. Add the Country field to the page-level filters.

B. Remove the Country slicer from page 1, page 2, and page 3. Add the Country field to the report-level filters.

C. Move the Country slicer from page 2 and page 3 to page 1.

D. Sync the Country slicer on page 1, page 2, and page 3.
